

Overcoming supply chain challenges with stock boiler equipment

Nationwide Boiler

Supply chain challenges have affected industries across the globe with higher costs, longer lead times and there is no end in sight. With large watertube boilers now averaging 40-50 weeks to manufacture, steam users are having to consider alternate solutions to meet production schedules and keep up with demand. Rental boilers can provide a temporary solution to these long lead times, but what happens when the rental market is tapped? The solution is stock boiler equipment.

Nationwide Boiler, a leading rental boiler company, has maintained a stock boiler program specifically for these moments of need. While their inventory consists of used/reconditioned and rental boilers often available for purchase, they also stock brand new firetube and watertube boilers in a variety of sizes as a means of providing an immediate solution. Choosing to purchase a stock boiler rather than a boiler that is built-to-order will yield a significant reduction in project lead times.

With a 55-year history, the company has built a stocking program based on historical

Nationwide Boiler's stock boilers can be the solution to current supply chain challenges.

ical data in terms of the most common steam capacities and operating pressures requested from the various industries that utilize boiler equipment. This includes a 200,000 pound-per-hour, 750 psi, 750 degrees Fahrenheit

superheat-package, watertube boiler that is continually in-stock and often supplied to pulp and paper mills, refineries and petrochemical plants.

Stock boilers are designed to operate over a broad range of operating pressures, offering versatility to support a wide variety of process needs. All stock boilers available from Nationwide Boiler are supplied with low NOx burners. However, they can meet even the most stringent emissions requirements with the inclusion of an optional CataStak™ SCR system. SCR technology is a proven solution for multi-pollutant reduction and emissions compliance as low as 2.5 ppm NOx.

In-stock boilers also offer the following advantages:

- An immediate solution when manu-

facturing lead times are at their longest ever.

- Protection from price increases due to escalating steel costs.
- Engineering drawings are immediately available.
- Equipment inspection is available prior to purchase.
- Equipment can often be shipped within days or weeks of receiving an order.

From as small as a 200 hp firetube boiler up to a 200,000 pound-per-hour watertube boiler, Nationwide Boiler's stock boiler program can be the solution to current supply chain challenges. With these supply chain concerns causing delays across the industry on an international scale, taking precious time out of projects and developments to customize a plan can be detrimental. Fortunately, Nationwide Boiler can cut out wasted time and provides a timely and affordable solution catered to each customer's unique needs.

Nationwide Boiler raises thousands at charity golf tournament

FREMONT, Calif. — Nationwide Boiler Inc. recently hosted a successful charity golf tournament in Pebble Beach, California. The company hosted nearly 100 guests, attracted over 40 sponsors and donors and raised nearly \$54,000 for the chosen charities. All proceeds were split and donated to two outstanding organizations: Make-A-Wish Greater Bay Area and the American Boiler Manufacturers Association (ABMA) for the Randy Rawson Scholarship Fund.

Nationwide Boiler president and CEO Larry Day at Pebble Beach for the company's annual charity golf tournament.

With a practice round at the Spyglass Hill Golf Course and tournament play at the world-famous Pebble Beach Golf Links, golfers and guests visited from across the U.S. and Canada to support this worthwhile cause. Funds were raised through various sponsorship opportunities and monetary donations in addition to raffles, an online auction and other fundraising activities throughout the two-day event.

Kappler's ChemScan hits the market

GUNTERSVILLE, Ala. — Kappler recently announced its ChemScan SMART label, a unique innovation that helps protective clothing users enhance both safety and productivity. The size-at-a-glance design eliminates wasted time searching inside a suit to find a size label, a common frustration when the need arises to don garments in a hurry.

The external sizing label also simplifies suit storage and inventory management. The QR code feature allows users to scan the label with a mobile phone to provide access to complete chemical test data on the suit fabric, plus extensive suit details. ChemScan labels are now standard on all Kappler flame-retardant wear and chemical-protective suits.

For more information visit www.kappler.com or call (800) 600-4019.

Brinderson achieves two years of total safety

COSTA MESA, Calif. — Brinderson Construction recently achieved 24 months without a recordable incident. Brinderson's safety excellence is the result of a dedicated team that practices safe behaviors and a strong safety culture.

Of note, Brinderson also received seven American Fuel and Petrochemical Manufacturers awards for its 2021 safety performance. These awards recognized zero recordable incidents at:

- Chevron, El Segundo, California
- Chevron, Salt Lake City, Utah
- ExxonMobil, Billings, Montana
- Marathon, Anacortes, Washington
- Marathon, Los Angeles, California
- Phillips 66, Los Angeles, California
- Phillips 66, Rodeo, California

Brinderson's focus on safety is demonstrated by developing personnel, systems and behaviors that promote a safe work environment. This focus is consistent with the company's values, extending from senior leadership to each and every employee.

HSI named a top online learning library company in 2022

EUGENE, Ore. — HSI was recently selected for the 2022 Top Training Companies list by Training Industry, the leading research and information resource for corporate learning leaders. This is the sixth year in a row that HSI, a leader in compliance and professional development training and environmental health and safety solutions, has been selected for the top 20 company placements.

"HSI's mission is making the workplace and community safer and smarter," said Chad Brickelbaw, CEO of HSI. "This recognition is a testament to the talented and dedicated HSI teams who create our online learning courses."

"This year's Top 20 Online Learning Library Companies features a strong course catalog that sets the standards of quality comprehensive solutions," said Jessica

Schue, market research analyst at Training Industry, Inc.

The HSI Online Learning Library offers a unique combination of courses in safety, compliance and industrial skills with a series specific to the oil and gas industry.

Layher showcases latest products, services at AWP

HOUSTON — Layher Scaffolding will attend the annual North American Advanced Work Packaging AWP Conference taking place October 17-18 at the Hyatt Regency in Houston. The event connects members of the construction industry across multiple sectors, and is supported by the Construction Industry Institute, the Construction Owners Association of Alberta and the European Construction Institute.

Layher adds value to ScaffoldTALK with the addition of its Protect System Scaffolding micro-course.

Visit the Layher information booth to learn more about Layher Scaffolding and evaluations for industrial projects.

For more information, visit www.layher.com or call (713) 947-1444.

United Rentals releases annual responsibility report

STAMFORD, Conn. — United Rentals Inc., the world's largest equipment rental company, announced the release of its 10th Corporate Responsibility Report documenting progress in 2021. Using the theme, "Work United: Building a Sustainable Future Together," the report covers major aspects of the company's corporate responsibility framework in three areas: environmental stewardship, social impact and governance and ethics.

Among the 2021 highlights in the report are: a 17-percent year-over-year reduction in United Rentals' already low U.S. OSHA recordable incident rate; 31.3 percent of sales and management roles held by diverse employees; approximately \$1 billion spent with diverse suppliers; and a nine-percent reduction in the intensity of greenhouse gas emissions from direct operations, toward a 35-percent reduction target by 2030.

Matthew Flannery, CEO of United Rentals, said, "We're pleased to share our 2021 progress on ESG initiatives in our latest Corporate Responsibility Report. While there's still work to be done, we're moving

closer to our goals for diversity, climate action and other key areas aligned with our values. We're a better company today because we work united in collaboration with all our stakeholders."

Additionally, United Rentals announced a new data-driven solution in its cloud-based Total Control fleet management platform that helps to provide information customers can use as part of their programs to monitor and manage their environmental impact. With Total Control Emissions Tracking, companies can create estimated greenhouse gas and engine emissions reports based on the rental equipment they use, which could help advance their sustainability strategies.

For more information, visit www.unitedrentals.com or call (844) 873-4948.

Superior Boiler, Nationwide Boiler announce partnership

FREMONT, Calif. — Nationwide Boiler Inc. has formalized a partnership agreement with Superior Boiler to jointly market and sell Superior's newly patented DFW boiler design. The partnership grants exclusive rights for Nationwide Boiler to lead the sales and marketing activity for rental boiler applications and other joint projects worldwide, where Superior's DFW O-type and Ds-type package water tube boilers are specified. In addition, the two companies will work together to jointly promote the sale of all package water tube boilers utilizing the new DFW design throughout California, Nevada, Oregon, Washington and the Gulf Coast of Texas. Nationwide Boiler is already utilizing multiple DFW boilers in its rental fleet, demonstrating one of the major advantages of this enhanced boiler design: higher capacity with a small footprint.

"The DFW concept goes back to 2018, working closely with Sundeep Bodapati at Superior, to think innovatively and design a higher-capacity boiler with a small footprint," stated Larry Day, president and CEO of Nationwide Boiler. "Bodapati's revolutionary concept not only accomplishes high capacity in a small footprint, but also has the advantages of faster load response, lower thermal NOx and lower rear-wall temperature without compromising boiler efficiency or performance. In the rental business, size and weight are major factors for mobility and freight cost. This new design allows us to get 25 percent more capacity out of the same footprint, which achieves a major savings in customer shipping cost and delivery time."
